PROFESSIONAL SUMMARY

Technical and detail-oriented professional with a background in software development, data systems, and process optimization. Experienced in designing functional solutions, managing structured data, and improving operational workflows. Strong foundation in object-oriented programming, database systems, and application development with a proven ability to translate technical concepts into practical solutions.

EDUCATION

Bachelor of Applied Science in Computing Technology & Software Development

Valencia College | 2022

President's List (GPA 3.75+)

Relevant Coursework: Database Management Systems, Software Integration & Testing, Object-Oriented Programming, Software Development 1 and 2

TECHNICAL SKILLS

Programming & Languages: Java, JavaScript, Python, HTML5, CSS

Frameworks & Libraries: Spring Boot, Spring Security, Spring Cloud, Angular, React, RxJS, JUnit

Backend & API Development: REST API Design, Microservices Architecture, Authentication & Security, Data Validation

Databases: PostgreSQL, MySQL, MongoDB, Spring Data JPA, Hibernate ORM

DevOps & Tools: Docker, Jenkins, Git, Maven, Tomcat, DigitalOcean, Eclipse, IntelliJ, VS Code

Data & Systems: Data collection, data analysis (Pandas, NumPy), data visualization (Matplotlib, Seaborn)

Embedded Systems: Raspberry Pi development, sensor integration, data logging systems

Other: CAD Design (Tinkercad), 3D Printing (FDM), Workflow Optimization

PROFESSIONAL EXPERIENCE

Community & Family Engagement Advocate @ LSF Head Start | July 2025 – Present

- Streamlined eligibility verification and enrollment workflows, improving data accuracy and process efficiency.
- Managed structured program data, ensuring compliance with reporting standards and regulatory requirements.
- Tracked and analyzed participation and attendance data to identify trends and improve service delivery.
- Maintained accurate digital records, supporting data integrity and system organization across program operations.
- Collaborated with cross-functional teams to improve outreach effectiveness through data-informed decision-making.

Design & Printing Specialist @ Independent | 2022 – Present

- Designed and developed custom 3D models using CAD software, producing functional components optimized for performance and material efficiency.
- Managed full product lifecycle from concept to final production, including modeling, testing, and quality validation.
- Applied problem-solving and iterative design techniques to improve product reliability and functionality.
- Translated technical requirements into scalable design solutions, ensuring consistent production quality.

HVAC Helper @ Airbender Heating and Cooling | 2014 – 2017

- Assisted in installation and maintenance of residential and commercial HVAC systems.
- Applied mechanical troubleshooting techniques to support operational continuity.
- Assist with formulating and placing bids.

CERTIFICATIONS

Master Spring Boot 3 and Spring Framework 6, Master Spring Boot 3 and MongoDB, Master Microservices and Spring Cloud

Currently learning: Apache Spark Programming in Python (PySpark) Using Databricks Free Edition

PROJECTS

NT Project – Full Stack Microservices Application

Developed a scalable full-stack application using Spring Boot, React, and PostgreSQL.

Designed microservices architecture with supporting services (authentication, messaging, error handling).

Implemented REST APIs and integrated front-end UI with backend services.

Utilized Docker and cloud deployment tools for application hosting and scalability.

N.S.S. Notify – Notification Management System

Built a web application enabling task-based SMS and email notifications using Angular and Spring Boot.

Integrated REST APIs, authentication, and database management using MySQL.

Implemented scheduling logic for automated message delivery using third-party services.

Greenworks Mapping Application (Team Project)

Co-led backend development for a city-based mapping application using Java and database systems.

Designed APIs, conducted integration testing, and contributed to CI/CD pipeline using Jenkins and Docker.

Participated in code reviews, documentation, and system design planning.

Vehicle Detection System (Embedded / Data Project)

Developed Raspberry Pi-based system to detect and log vehicle activity using sensors.

Collected and analyzed data using Python (Pandas, NumPy, Matplotlib).

Designed system for automated data capture and real-time monitoring.
